

Information Security Policy

It is our goal to minimise information security risks and to protect our customers' and other interested parties' data, as well as to protect our core and supporting business operations from disruptions. Therefore, our policy is to ensure that

- our information security management system conforms to internationally accepted best practice as defined in relevant standards such as ISO 27001 and the related controls
- relevant information security controls are implemented to protect Semantix's information assets against unacceptable risks to their confidentiality, integrity and availability
- all employees are sufficiently trained in information security matters and know that we are all responsible
- all applicable laws and requirements related to information security are met
- our information security management system is continuously improved.
